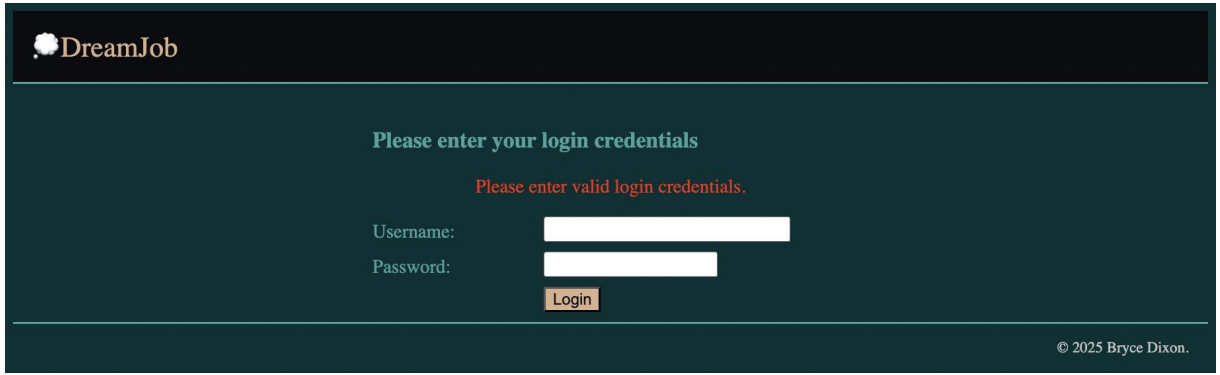
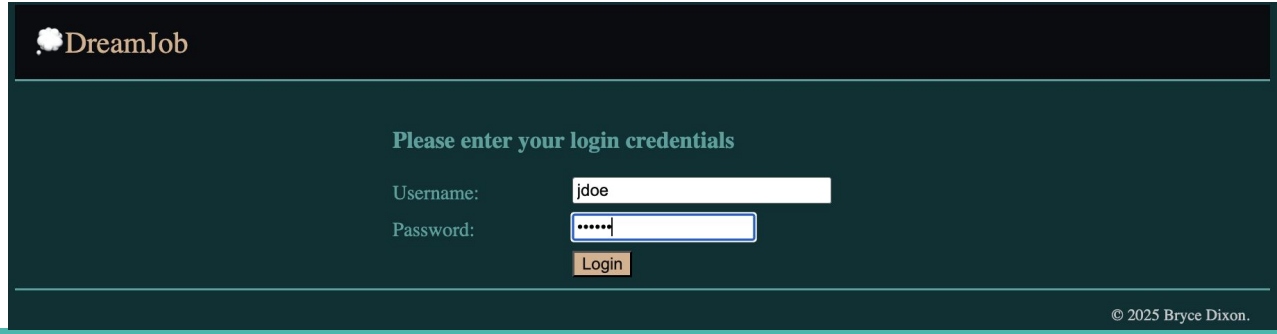
COMP 3541:
Final Project User Guide

Bryce Dixon

Login Page

- If invalid credentials are added, the user is returned to the login page with an error message.
- If the user enters valid login credentials (username: jdoe, password: sesame), they are sent to the home page.





Home Page (Job List Main View)

- From this page the user can:
  - A. Change the order of the jobs they have entered.
  - B. Delete a job.
  - C. Update/ View a job
  - D. Search Jobs
  - E. Add a Job
  - F. Logout
- These actions will be shown in the subsequent pages of this presentation.

A. Change Job Order

- On the home page, the user can click the UP or DOWN arrows on the left-hand side of the table.
- When the UP button is clicked, the item is moved up one spot in the ranking list. This is also updated in the database.
- When the DOWN button is clicked, the item is moved down one spot and is also updated in the database.
- The last item in the list cannot be moved down, while the first item in the last cannot be moved up (as indicated by the 'x').

B. Delete Job

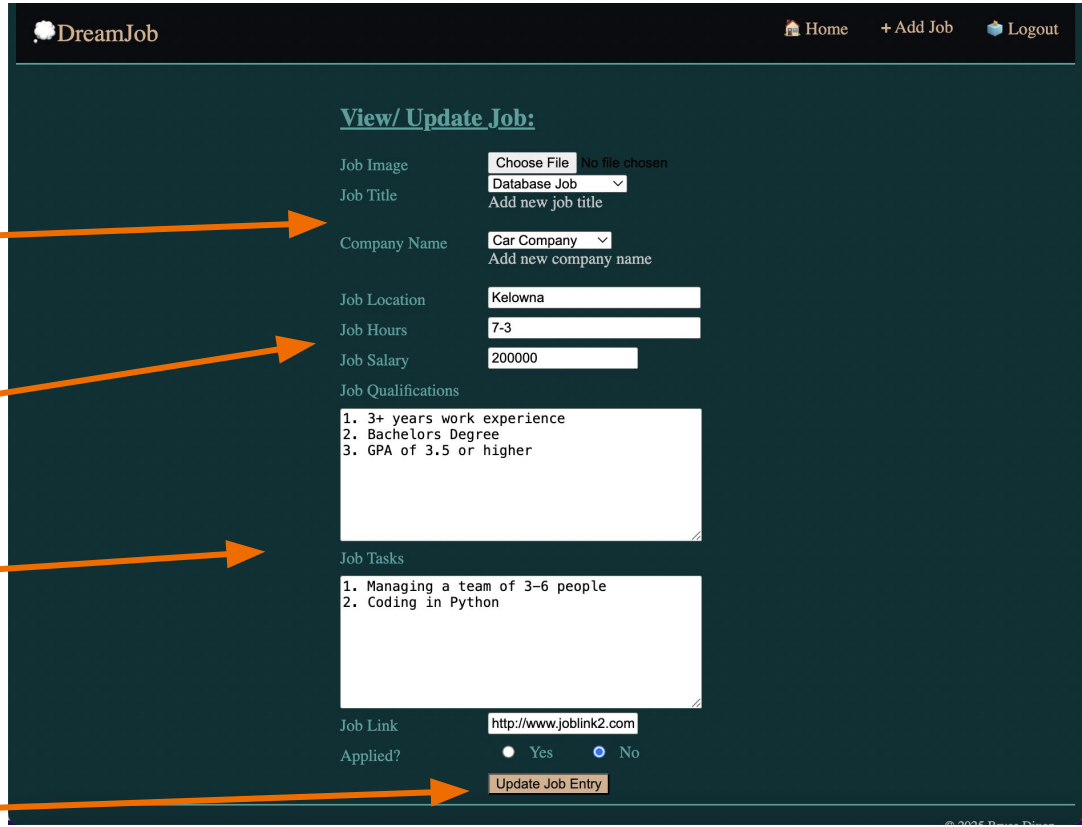
- When the "Delete" button is clicked, the job is removed from the database and will no longer display in this list.

B. Update/ View Job (Part 1/4)

- When the "Select" button is clicked, a new page is displayed which displays all the job details (as not all details are displayed in the home page table).
- This is illustrated on the next slide.

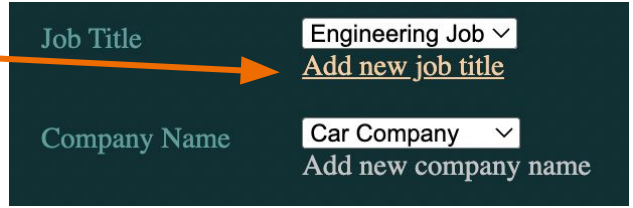
B. Update/ View Job (Part 2/4)

- On this page the user can view additional data, as well as modify the data for the job selected.
- The "Job Title" and "Company Name" drop downs are only populated with the Jobs and companies that this user has entered in the database.
- 'Job Hours' is a text box as I felt the hours can be variable and this gave the user the most control.
- 'Job Qualifications' and 'Job Tasks' are textarea boxes as I felt this gave the user the greatest amount of control over the presentation of these items.
- If the user selects "Update Job Entry", their changes will be updated in the database.



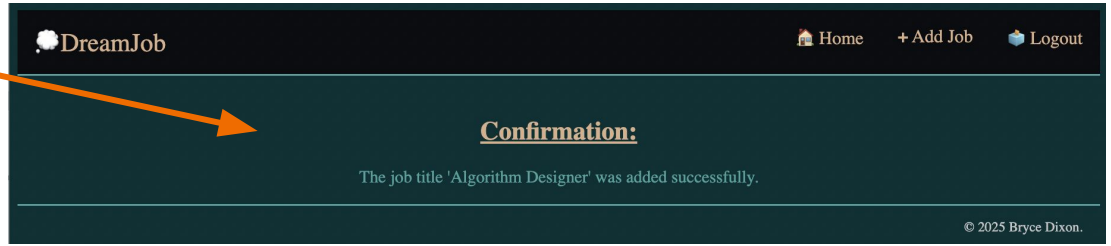
B. Update/ View Job (Part 3/4)

- If the user does not have the job or company they want in their drop down list, they can select the link below the drop down list.



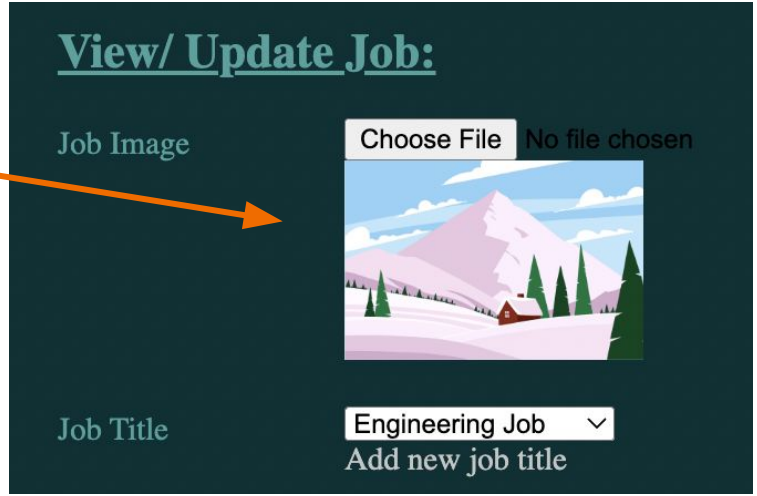
- This takes them to a page where they can add a new job title or company, which will then populate in the drop down list when they return to the update OR add job page (discussed in future slides).

- This change provides a confirmation as I felt it was unclear if the change occurred without this.



B. Update/ View Job (Part 4/4)

- The Update/View page also allows for the user to upload an image associated with the job.
- This was added for me to practice adding this into a form and database. It has little benefit to the application itself.
- When the user selects a job, they can choose to add a photo. If they update the job but not the photo, the photo remains set for the job.

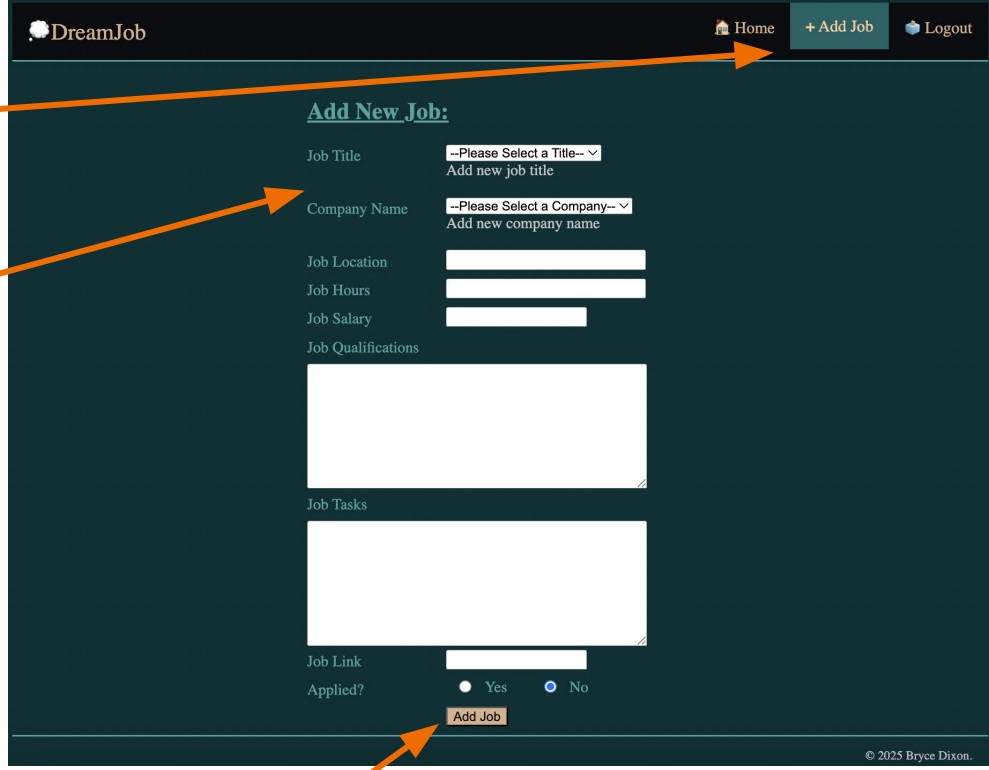


C. Search Jobs

- The user can search their job list and they will be given search results whose Job Title, Company, Location, Job Hours match the search entered.

E. Add Job

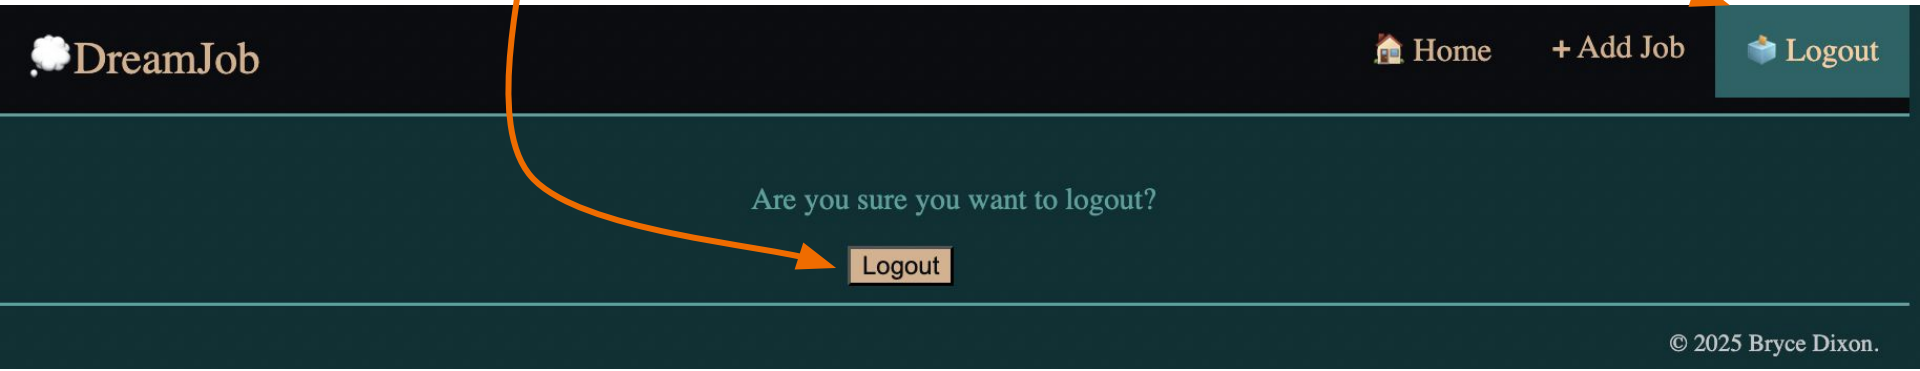
- When the user selects "Add Job" in the top nav bar, they are greeted with a page where they can add a new job.
- Like the 'Update Job' page, the user can add new job titles or companies if the ones they want are not in their drop down lists.
- They must fill in all entries or else they are greeted with an error message.
- For convenience, the form saves any data the user has entered when they submit with an error.



- When all data is entered correctly, and the user hit "Add Job" the job is entered to the bottom of their job list table in the home page.

F. Logout

- If the user selects "Logout" in the nav bar, they are asked to confirm their logout.
- If they click "logout", the are logged out and returned to the login page.



~Presentation End~

Thank you!
